Subject: How Water Stores Information – "The Mechanics of Cluster Formation"

The secret of the property of water to store information has been discovered
Research work is work for peace

Dear «Anrede2»,

It gives me great pleasure to make accessible to you today, by means of this letter, one of water's long-hidden secrets. Water stores information perfectly. In this connection, cluster research, carried out worldwide and at the university level, is very worthy of note. For 200 years, homeopathy has been furnishing us with millions of proofs of the probably most enigmatic property of water, i.e., that of storing information.

My own busy lecturing activities in this area for the past three years, combined with years of synthesizing and forming logical associations between the various natural sciences, and in turn between these and the humanities, have gradually brought me to the crux of what happens physically in water, with its "mechanics of cluster formation".

Foundations:

- The universe knows no chance.
- Physics acknowledges no chance; everything moves or happens according to the principle of cause and effect.
- Everything is energy. Energy is indestructible, but nevertheless alterable.
- Energy is always moved helically, like a whirlpool. (The question is: "is moved" or "moves" or both?)

Deductions:

- No atom moves by chance, but rather according to a law.
- Water molecules move according to laws and are moved.
- Water molecules never combine by chance and never dissociate by chance, even if their bond lasts only a fraction of a millionth of a second.
- The energy (binding energy) to build a stable hydrogen bond between two water molecules comes from a third source, and not from the water molecules themselves.

The solution to the enigma of the "mechanics of cluster formation" in water:

Every sound is form. (The full designation of sound is actually "sound form".)

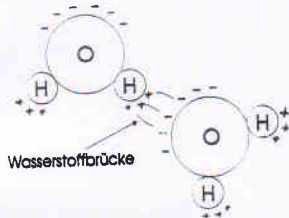

Form and sound cannot be separated from one another any more than brightness from light.

Every sound is form, and every form is sound.

Sound is only secondarily a question of acoustics. It is primarily subatomic, regularly ordered, dynamic energy in vortex form. Its overtones develop, according to the Mandelbrot Set, similar sound vortices of ever smaller dimensions. These characteristic dynamic fine structures of the highest order exist even in a physical vacuum. If the space is filled with molecules, however, the fine structures move atoms and molecules as well.

In the case of water, water molecules are whirled into the superfine helical structures of the sound fractals; the intensity of the sound provides, or rather represents, the binding energy for the formation of the hydrogen bonds.

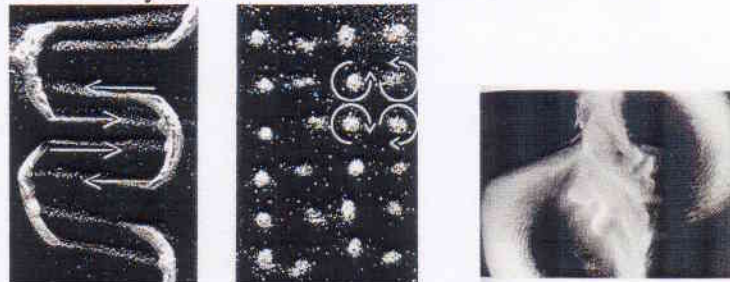

(right, from *Die Mathematik und das Göttliche*, Clifford A. Pickover, Spektrum-Verlag ISBN 3-8274-1430-x; S. 227, fractal pattern, detail of a "Mandelbrot Set")

Utilizing the water in this way, the sound-form vortex produces a perfect material cluster copy of itself and resonates from this point on within the existing water sound spectrum. The greater the intensity of the original sound, the greater is the binding energy for the hydrogen bond (see sketch at left), and the more stable and – under normal conditions, more durable – is the newly generated water cluster.

In the homeopathic practice of dilution, for example, increased starting-sound intensities are attained in the solutions by means of rhythmic succussion (energetization), and as a result, very stable, long-lived information clusters are created. This means that in higher dilutions, in the final analysis, the clusters themselves act as stable units of sound. Thus a direct molecular substance is no longer required for higher potentiation, nor is it necessary for the selective information-initiated biological effect in an organism. Note: Very extensive, scientifically unequivocal and arbitrarily reproducible research results with regard to the effect of homeopathy are available. (For example: biophoton research by Prof. F.A. Popp, Neuss, Germany; see also: www.homoeopathie-thueringen.de; *Hinweise zur Wirksamkeit von Homöopathie [Evidence of the Efficacy of Homeopathy]*, Resch/Gutmann, Austria; and many others; also worthy of note, the work of Dr. Enza Maria Ciccolo: *Lichtwasser und ihre Heilkräfte [Light Waters and Their Healing Powers]*, AT-Verlag Gudrun Dalla Via, 2nd edn.)

The abundant research work of Hans Jenny (1904–1972) provides graphical basic information with fascinating photographic material and data, both static and animated. It concerns for the most part phenomena which are explainable by means of neither the specific vibration of the base plate in the experimental setup in question (the common interpretation of the phenomenon of Chladnic sound figures) nor acoustics, but rather exclusively and impressively by means of the sound substance beyond the material elements.

Sample illustrations from *Cymatics – The Structure and Dynamics of Waves and Vibrations* (MACROmedia Verlag, Hans Jenny, 1967, ISBN 1-888-13807-6)

Everything moves. Consequently, everything is also sound, and is thus embedded in the laws of harmonics and subject to these. This in turn means that everything is influenced, beneficially or disturbingly, by sound. Each individual biochemical reaction has a wholly specific timbre all its own – indeed, each is a specific timbre – be it a G, an F#, an E, etc. This

is reality! Thus, not only are homeopathic remedies effective, but above all the information stored in drinking water is of great importance for the well-being of us all, since no one can evade it unless he or she actually knows how to delete the undesired, dissonant information.

What came first, the chicken or the egg? I would say that our awareness has gained a conscious new dimension. At the beginning is the sound form.

The "mechanics of water cluster formation", and, in consequence thereof, the effect that information stored in water has on biological systems, fits logically into and complements both historical and new results and experiences, for example, from music and sound therapy, as well as the highly topical biology research of Prof. Bruce Lipton (www.bruce-lipton.com) and also Andrew Pelling, with his cell-sound research (www.andrew-pelling.com), and much more, and expands our spectrum of consciousness, liberating it, and uniting opposites.

We scientists, more than many other members of our society, are obligated in a special way to the cause of peace. Our upright, alert aspiring beyond all dogmatism and all self-interest overcomes all boundaries and creates understanding where there was ignorance and therefore fear. Today's society is still too much determined by fear, competition, and exploitation: Perhaps the outcome of the latter, also where the earth's resources are concerned, is still open-ended.

From time to time it is necessary to synthesize the knowledge that we have experienced in our alertness and acquired together, in order to awake again to new and expanded motivation and responsibility, leading continually to more comprehensive love, sympathy, and solicitude. What would knowledge be worth if it did not lead to this?

If we are capable (and we are!) of uniting – scientifically and without contradiction – the once segregated camps of the natural sciences and the humanities via the interface of sounds and crystalline structures (not elaborated here) we will be able to regain our health, both as individuals and as a society, because suffering affects us not only in the horizontal, physical dimension, but above all in the vertical, mental-spiritual dimension. Complete(!) healing is the foundation for peace. In peace there is no fear, in knowledge no uncertainty, and fear dissolves gradually as knowledge of the oneness of all life increases.

We are messengers of peace.

Knowledge must create peace. Knowledge must unite, not separate. Knowledge must nourish and produce pleasure for all. Knowledge must sublimate motivations and transform them, from conscious and unconscious fear and rivalry to observant love and practiced sympathy.

Let us take a further new step, again together.

I send you my regards and wish for you and for all of us a joyous, alert new today. This letter is being sent today to several addresses. Please feel free to copy and distribute it.

Jakob Mayer
